

Haryana Police Inventory App

http://localhost:3210

Runs on your own computer — start the server and open the address it prints (usually http://localhost:3210)

Before You Start — Opening the App

This app runs on the computer it is installed on — there is no online website, and no internet connection is needed after the first start.

1. Open the project folder and double-click **run-local.bat** (on other systems, run **npm start**).
2. A black console window opens and must stay open. That window **is** the app server — closing it stops the app.
3. Your browser opens automatically. If it does not, look at the **App:** line in the console and open that address — it is usually **http://localhost:3210**. If that port is already in use the server picks the next free one, so always open the exact address it prints.
4. When you finish, click the console window and press **Ctrl+C** to stop the server.

Where your data lives: everything is stored in one file — **local-data\db.json** in the project folder. Copy that file to back up. Delete it and restart to start fresh.

Using it from a phone or another computer: start the server on the main computer, then open **http://<main computer's IP>:3210** on the other device. Find that IP by running **ipconfig** on the main computer and reading *IPv4 Address* (for example **192.168.1.5**). Both devices must be on the same office network.

How to Log In

1. With the server running, open the address it printed (usually **http://localhost:3210**) in your browser.
2. Enter your **Username** and the **Password** provided to you by your admin (passwords are intentionally hidden in this guide).
3. Click **Sign In**.
4. Use the menu on the left to browse Dashboard, Inventory, Transactions, Demands, Inspections, Allotments, and Reports. The notification bell, **Users**, and **Districts** buttons are in the top bar.

On the login screen you can also use **Remember me** and **Show password**. In demo mode, seeded user accounts appear as quick-login buttons at the bottom of the login screen — click one to sign in instantly with that account.

New here? You can request an account yourself from the login screen — click **"Request Access / Sign Up"** and fill the form. An admin will approve it and create your login.

User Credentials

Username	Password	Role	District
developer	••••••••	Developer Admin	Gurugram
admin	••••••••	District Admin	Gurugram
admin2	••••••••	District Admin	Faridabad
user	••••••••	General User	Gurugram
mhc	••••••••	MHC	Gurugram
station	••••••••	Station Manager	Gurugram
fbf_user	••••••••	General User	Faridabad
fbf_mhc	••••••••	MHC	Faridabad

Passwords are not listed in this guide for security reasons. If you do not know your password, an admin can reset it from the **Users** tab (Edit user → set a new password), or use **"Forgot Password?"** on the login screen.

What Each Role Can Do

- **Developer Admin** Full access to everything, all districts. Can create / edit / delete any user, manage approvals, switch districts.
- **District Admin** Full access within their own district. Can manage users in that district, but cannot create Admin or Developer Admin accounts.
- **MHC** Can view and record material / MHC entries within their district.
- **TSI** Telecom / Signals inventory operator within their district (material, inspections, allotments).
- **Station Manager** Manages station-level inventory within their district.
- **Police Post** View / manage inventory for their post.
- **General User** Browsing and viewing data for their district.

Forgot Password?

On the login screen click "**Forgot Password?**", enter your username and registered mobile number. A request is sent to the admin, who will reset it for you.

Notes

Keep your password private. Never share your login with others.

Log out when finished on a shared device.

Passwords are stored securely (hashed) — not even admins can see your password. For help or a new account, contact the system admin / developer admin.
